

Login 365 admin

Continue

to know if it's possible to use the login history on Office 365, and eventually the login attempts as well? Seems like a version of Outlook has this but I can't find anything like it on 365. Thanks. "ariaCollectorUrl": "ariaTenant": "6e758994e4b3329929676d6138138e-c2346d4b-478e-446f-9908-59597f784c33b7365", "buildDate": "2022-08-31 03:50:12Z", "buildId": "70e74b2c-7d75-f5c8-4408-460565921f", "contentType": "correlationId": "775865c6-6469-4773-944c-73965c3c6089", "deploymentEnvironment": "prod", "devEnvironment": "ServiceFabric", "ceiling": "WorldWide (RM)", "lights": "wachtostprofidrow.thumbaakall.P.R.1020934-24.P.R.101936-24.P.R.101875-21.18.P.R.1004015-21.18.P.R.1002925-20.P.R.108797-27.P.R.108833-24.P.R.10875-24.P.R.110074-16.13.P.R.106573-4.P.R.95756-21.P.R.93960-23.P.R.88009-69.P.D.116687-1-3.P.10195-1.8.P.1004015-2-18.P.R.1002925-20.P.R.108797-27.P.R.108833-24.P.R.10875-24.P.R.110074-16.13.P.R.106573-4.P.R.95756-21.P.R.93960-23.P.R.88009-69.P.D.116687-1-1.P.D.116687-1-5.P.D.109195-14.P.D.48024-139.FTR.R.Unknown.P.LT.Unknown.FK.Unknown.FD.Unknown.D.2022-09-07 07:48:12Z EGS Ring: Worldwide (RM) This Office 365 customizer tutorial explains how to customize the Office 365 login page. You can add your company logo or a small sign-in page text into Office 365 sign-in page in Office 365. Customizer Office 365 login page Customizer Office 365 login page We can do this from Office 365 Admin center. Open Office 365 Admin Center. Click on "Azure Active Directory" the below: customize office 365 login page The page will come to wait for some time. Now we can able to see our branding page. Select All services (highlighted one). Select Company branding and Click on Configure like below. How to Customize Office 365 login page The Office 365 Company branding configuration page contains the field. Place Office helps your students connect and achieve more together, whether in the classroom, at home, or around the globe. The new Office brings together your favorite Microsoft apps all in one, intuitive platform. Office seamlessly tracks updates, chat, and comments across all your files so you can pick up right where you left off. The new Office brings together your favorite Microsoft apps all in one, intuitive platform. Teachers and students get access to the best tools for learning anywhere—in the classroom, remote, or in a blended environment—for free. Office encourages creativity and collaboration in any learning environment—whether in the classroom, remote, or in a blended environment. Create engaging design environments that help students develop knowledge and skills essential for both academic and career success. Give students the tools to learn and collaborate on projects together and independently, all in one place. Anyone in your organization can quickly create documents, presentations, and worksheets within a single, unified, Office experience. Office empowers your organization to organize, and safely store files in OneDrive with intuitive and easy organizational tools. Keep your business connected from anywhere with chat and cloud collaboration tools. Office seamlessly tracks updates, chat, and comments across all your files so you can pick up right where you left off. The new Office brings together your favorite Microsoft apps all in one, intuitive platform. Previews Make sure that you've disabled caching for your website in case your website is not working as expected. We have tested our plugins with WordPress >= 4.1.1 and PHP >= 5.6.40 You need to be (Office 365) Tenant Administrator to configure both Azure Active Directory and the plugin You may want to consider restricting access to the otherwise publicly available wp-content directory Support We will go to great length trying to support you if the plugin doesn't work as expected. Go to our Support Page to get in touch with us. We haven't been able to test our plugin in all endless possible WordPress configurations and versions so we are keen to hear from you and happy to learn! Feedback We are keen to hear from you to share your feedback with us on Twitter and help us get better! Open Source When you're a developer and interested in the code you should have a look at our repo over at WordPress. Microsoft / Azure AD based Single Sign-on/Embedded Power BI for WordPress/Embedded SharePoint Online Search for WordPress/Employee Directory/Support for Azure AD B2C and Azure AD B2C/Sending WordPress email using Microsoft Graph/Synchronizing users from Azure AD to WordPress/Embed WordPress in a Teams Tab or App/Assign WordPress roles / Deny access based on Azure AD groups / I want looking for a way that I can login with my O365 account into my WordPress. This was so easy!! thank you so far so good. Easy to setup plugin with Microsoft Active Directory. I am using to control access to a LearnDash LMS site. Very straightforward. I'm not sure if I will need the paid add-ons yet. Seems quite good "out of the box". Instructions for setting up Azure Active Directory are excellent. Very accurate and simple to follow. They obviously put significant effort into their documentation. This is the perfect solution for cutting down on admin maintenance for users accounts and new users. Thank you developer! The support was exactly what I require and the setup is very well documented. Cheers! Not only is this a fantastic plugin but the support has been absolutely brilliant. Cannot recommend highly enough. Very happy with this plugin. Process was well documented and worked exactly as desired. Read all 83 reviews! Fix: The delegated mail authorization feature would - under circumstances - fail to get the mail specific tenant ID and as a result an attempt to refresh the access tokens may fail. [LOGIN, MICROSOFT GRAPH MAILER] Fix: The Redirect URL field for the mail authorization is no longer greyed out and can be changed by administrators. [LOGIN] Fix: A backward-compatibility issue with Audiences would cause a critical error when editing a page. Administrators with any of the following extensions installed must update as soon as possible: ROLES + ACCESS, SYNC, INTRANET. Change: Sending WordPress emails using Microsoft Graph can now also be configured with delegated permissions. Administrators are urged to review the (documentation) and to update their configuration. [LOGIN, MICROSOFT GRAPH MAILER] Feature: Audiences - used to target posts and pages to specific Azure AD groups - can now also be used on a post or page using a custom metabox in the sidebar. Consult the updated documentation for details. [ROLES + ACCESS, SYNC, INTRANET] Feature: Azure Active Directory secrets can now be stored in the website's WP-Config.php and removed from the database. [MAIL] Improvement: A number of plugins have been improved to help administrators find loopholes in the configuration: e.g. of user synchronization and the integration of various SharePoint Online services. [LOGIN] Fix: The plugin no longer "blinks" a state parameter when sent in the header of any request. This prevented - amongst other things - enabling / disabling of WordPress auto-updates. [LOGIN] Fix: The Employee Directory app now shows profile information when users are searched for using SharePoint. [M365 APPS, INTRANET] Fix: Version bump for all WPO365 plugins. Fix: Recent changes to the built-in notification service could cause a fatal error for older PHP versions that has now been fixed. [LOGIN] Fix: If the plugin is configured to send WordPress emails using Microsoft Graph then it will now always replace the "from" - email address if (WordPress tries to send emails from "wordpress@stname") WordPress will propose this email address in its email as set by the plugin sending the email (e.g. Contact Form 7). This email may pass checks but in reality this email address mostly does not exist. The option to fix the "localhost" issue has been removed since this fix improves the behavior for all hosts (incl. localhost). [ALL] Improvement: Various wp-admin banners as well as some translations have been updated. Also a teaching handle is shown on the Single Sign-on page to help admins quickly find the WPO365 documentation center. - [ALL] Change: Administrators who selected OpenID Connect based single sign-on, can now choose between the Hybrid Flow and the Authorization Code Flow. New installations will automatically be configured using Authorization Code Flow. Read more [LOGIN] Change: Support for Azure AD B2C custom policies (sign-up, sign-in and password reset) is no longer a premium feature. [LOGIN] Change: All features of WPO365 [CUSTOM USER FIELDS] extension are from now on supported by the WPO365 [LOGIN + extension. See our website for details and pricing. [CUSTOM USER FIELDS, LOGIN] Change: A new WPO365 Features Dashboard has been added that allows administrators to toggle features such as e.g. SSO, MAIL and SYNC on or off. [LOGIN] Feature: Admins can now choose to hide the WordPress Admin bar for specific roles. [LOGIN] Feature: Requesting access tokens from Azure AD can now be further secured using a Proof Key for Code Exchange (PKCE). [LOGIN + SYNC, INTRANET] Feature: Protect and secure your WordPress REST API with Azure AD generated OAuth access tokens [PREMIUM]. [LOGIN + SYNC, INTRANET] Feature: Protect and secure your WordPress REST API with WordPress REST cookies. [LOGIN] Improvement: Azure AD B2C custom claims (roles) in the ID token can now be mapped to custom WordPress user meta fields. [LOGIN + SYNC, INTRANET] Improvement: When specified in - for example - an email from the "From" address will be used to send the email from (instead of the configured "From" address and if the address specified in the form appears to be valid). This behavior is a premium feature and not enabled by default. [MAIL, SYNC, INTRANET] Improvement: Admins can now set a different Azure AD tenant for sending WordPress emails using Microsoft Graph when the plugin is configured for Azure AD B2C based single sign-on. [ALL] Improvement: Admins can now update the priority for the get_avatar hook on the plugin's User sync page (default 1). [AVATAR, SYNC, INTRANET] Improvement: The plugin is now able to work with the more appropriate GroupMembers Read All permissions instead of Group Read All and admins who configured role based access restrictions are advised to update the API permissions for the registered application in Azure AD. [ROLES + ACCESS, SYNC, INTRANET] Fix: The logic to update the blog ID in a WordPress Multisite (WPMU) will always test with a trailing slash. [LOGIN] Fix: A custom login message - for example created with LoginPress - will now show as expected. [ALL] Fix: Non-dynamic roles in an identified configuration used to enable RLS when embedding Power BI content no longer causes a fatal error. [M365 APPS, INTRANET] Fix: It is now possible to save empty custom user profile fields when manually updating a user's profile. [CUSTOM USER FIELDS, SYNC, INTRANET] Change: Sending mail as HTML is no longer a premium feature. [LOGIN, MAIL, SYNC, INTRANET] Change: Saving sent emails in Sent Items is no longer a premium feature. [LOGIN, MAIL, SYNC, INTRANET] Change: The plugin will now always force the use of the WPO365 avatar feature if it enabled by removing other similar filters. [AVATAR, SYNC, INTRANET] Improvement: Administrators can now configure the WordPress plugin to prevent WordPress sending a notification to admins when a user changes a password. [LOGIN + SYNC, INTRANET] Improvement: The Graph Mailer components have been refactored to improve logging / auditing. [LOGIN, MAIL, SYNC, INTRANET] Fix: Login button label's text will not be wrapped on a new line. [LOGIN] Fix: The premium mail function to log all emails sent did not properly return and when used in combination with another mail plugin - e.g. WP HTML Mail - emails were not sent as expected. [MAIL, SYNC, INTRANET] Fix: The mail-to table can now be scrolled horizontally. [MAIL, SYNC, INTRANET] Fix: Sending a test email with attachment is now supported by all versions. [LOGIN] Fix: The plugin will not try to send attachments larger than 3 MB (to prevent the mail being refused by the Microsoft Graph API). The Azure AD based Employee Directory app will now retrieve the user's profile and cache them separately from the cache of employees as this sometimes would break the hierarchy. [M365 APPS, INTRANET] Improvement: You can now create a shortcode based app to embed Power BI content that supports the "App owns data" scenario and configure it to use the 2nd (app-only) AAD App registration. This is especially useful when the administrator configured Microsoft Azure AD B2C or SAML 2.0 based single sign-on and the AAD App registration for SSO cannot be used. [M365 APPS, INTRANET] Fix: Several issues related to PHP 8.x - e.g. support for deep-links - have been fixed. [ALL] Fix: When an administrator has hidden the login button the artifacts required to initiate the WPO365 Sign in with Microsoft flow - e.g. needed for a custom login button or Dual Login - are now loading correctly. [LOGIN] Change: The default login button's accessibility has been improved and now uses a BUTTON element (previously a DIV) with an aria-label that corresponds to the button's caption. [LOGIN] Improvement: For new installations of the plugin the default value of the session duration has been updated to 0 (was 3600) and a user will not be automatically forced to re-authenticate after 1 hour. [LOGIN] Fix: The (basic / free version of the) Microsoft 365 shortcode app to embed a SharePoint / OneDrive Documents library now correctly recognizes when it should use the new WPO365 REST API for Microsoft Graph instead of the older token service. [LOGIN] Fix: The exception level for "Serious attempt to try to bypass authentication" has been changed from ERROR to WARN since many falsepositives have been reported. [LOGIN] Improvement: When the WPO365 plugin is used to send WordPress emails, it will now honor a reply-to email address defined "externally" e.g. when using Contact Form 7. [ALL] Fix: The Microsoft 365 shortcode app for SharePoint Online Search now properly encodes the query template / custom written query to enable the use of double quotes when defining values for a managed property e.g. Path: "Documents". To benefit from this you must re-create the shortcode for the app. [M365 APPS, INTRANET] Fix: When using the Dual Login Feature the plugin no longer adds an HTML DIV element with a duplicate ID. [LOGIN + SYNC, INTRANET] Change: The Microsoft 365 shortcode app for embedding Power BI has been thoroughly updated to work with the recently introduced WPO365 REST API for Microsoft Graph. Existing shortcodes will continue to work with the WordPress AJAX API but it is recommended to update those apps by creating new shortcodes using the Shortcode Generator. [M365 APPS, INTRANET] Change: The Microsoft 365 shortcode app for embedding Power BI now supports dynamic tokens used when defining Effective Identifiers when row-level security (RLS) is configured for the dataset. Dynamic tokens can be replaced with direct attributes of a WordPress user or alternatively user meta. Please refer to the updated documentation for guidance how to use dynamic tokens. [M365 APPS, INTRANET] Improvement: Newly created Power BI shortcodes apps will cache the access tokens in the browser's session storage and this cache will be emptied when the user navigates away from the page. [APPS, INTRANET] Fix: The license checker will not show a warning for development, test and staging environments if those web addresses can be identified as such. [ALL] PREMIUM] Fix: Use the home URL, instead of the site URL (where WordPress application files are accessible for the base URI when connecting to the WPO365 REST API for Microsoft Graph. [ALL] Fix: Administrators can activate Internet Explorer 11 compatibility mode (at the cost of losing the integration capability with Microsoft Teams) when they go to WP Admin + WPO365 > ... -> Miscellaneous and toggle the corresponding option. [ALL] Breaking: Additional configuration is needed for the WPO365 REST API for Microsoft Graph that is used by the WPO365 [DOCUMENTS] Gutenberg Block, WPO365 User synchronization and the updated versions of the M365 APPS (included in this release) to keep your data as safe and secure as possible. On the plugin's Integration page in the section labelled Microsoft 365 Apps you must now specify whether user meta should be signed in with Microsoft when they connect to the API, which Microsoft Services endpoints are allowed, whether apps may request application-level tokens (instead of user-level tokens with delegated permissions) and whether proxy-type of requests are permitted. [ALL] Breaking: Because the direct use of PHP cURL has been removed in favor of WordPress' builtin HTTP API the cURL Proxy Address setting has been removed. Please refer to the WordPress documentation for instructions how you can use WP_PROXY_HOST and WP_PROXY_PORT if you need to configure a proxy for outgoing network connections. [ALL] Breaking: The End User License Agreement will be updated from 1st April 2022 and a license for a premium user will always be linked to the domain of the WordPress instance. Therefore you may need additional licenses for development, test and staging instances if those are set up under different domains. Starting with this version premium extensions / bundles will generate a warning that a license is required if no valid license was found for that particular instance. [ALL EXTENSIONS / BUNDLES] Change: The Microsoft 365 shortcode apps for embedding SharePoint Online Search, a SharePoint / OneDrive Online Document Library, a Microsoft Graph based Employee Directory and a Yammer Feed have been thoroughly updated to work with the recently introduced WPO365 REST API for Microsoft Graph. Existing apps will continue to work with the WordPress AJAX API but it is recommended to update those apps by creating new shortcodes using the Shortcode Generator. [M365 APPS, INTRANET] Improvement: The WPO365 SCIM Client for Azure AD User provisioning now can be configured to obtain the user's Azure AD object ID. This is needed if the plugin needs to retrieve additional user attributes, a user's profile picture or Azure AD group memberships from Microsoft Graph. See the Troubleshooting paragraph of the SCIM online documentation for details. [SCIM, INTRANET] Improvement: The Microsoft Graph based Employee Directory shortcode app has been updated and can now be configured to use SharePoint People Search to search for users by skills, projects and other profile attributes. It will also include profile details on the user's info tab (when using the Contacts template and / her profile). See the online documentation for details. [M365 APPS, INTRANET] Improvement: The (Microsoft Graph) based Employee Directory shortcode app can now be used by users that did not sign in with Microsoft. See the online documentation for details. [M365 APPS, INTRANET] Improvement: The SharePoint / OneDrive Documents shortcode app (to embed a SharePoint library in WordPress) is no longer considered deprecated and has instead been updated and can now also be configured to allow access to anonymous users and to retrieve and render custom SharePoint columns / fields. See the online documentation for details. [M365 APPS, INTRANET] Improvement: The SharePoint / OneDrive Documents shortcode app can also now be configured to read its configuration (SharePoint site collection, title of the library and optionally a folder path) from a number of queyrating parameters. See the online documentation for details. [M365 APPS, INTRANET] Improvement: The Microsoft Graph mailer for WordPress can now log all outgoing WordPress transactional emails and allows you to try to resend emails that previously failed to send. See the online documentation for details. [MAIL, SYNC, INTRANET] Improvement: The Microsoft Graph mailer for WordPress can now be configured to send all outgoing transactional emails as BCC to help you prevent reply-to-all mail pollution. See the online documentation for details. [MAIL, SYNC, INTRANET] Improvement: On the plugin's User sync configuration page in the section Custom user fields you can now select how you would like the WPO365 plugin to update a WordPress user's display name. Possible choices are: Same as the display name according to Azure AD, given name and surname according to Azure AD or surname, given name according to Azure AD. [CUSTOM USER FIELDS, SYNC, INTRANET] Improvement: The plugin will now always apply the Azure AD user attributes to WordPress user meta mappings regardless of whether you have opted to show them on a WordPress user profile page. [CUSTOM USER FIELDS, SYNC, INTRANET] Improvement: A new endpoint has been added to the WPO365 REST API for Microsoft Graph where developers can send a preferred Microsoft Graph request which will be transparently proxied to Microsoft Graph in the context of the current user. This endpoint must be separately enabled. [ALL] Improvement: Arophid endpoint have been added to the WPO365 REST API for Microsoft Graph where developers can request an OAuth access token for Microsoft Graph in the context of the current user. This endpoint must be separately enabled. [ALL] Improvement: In accordance with the WordPress developer guidelines direct use of PHP cURL has been removed and instead the plugin now uses WordPress' builtin HTTP API. [ALL] Fix: The OneDrive library (used for adding SAML support to the plugin) has been updated to the latest version. Small modifications have been made to further ensure compatibility with PHP 8. [ALL] Fix: In accordance with the WordPress developer guidelines all output has been secured / escaped. See the official WordPress documentation for details. [ALL] Fix: A bug has been fixed that prevent the Internet Auth-only AUTHORIZATION Scenario from working correctly. [LOGIN + SYNC, INTRANET] Fix: A bug has been fixed that prevented the WPO365 Wizard / Configuration pages to handle non-latin characters. [ALL] Fix: Version bump for all WPO365 plugins. Please check the online change log for previous changelogs.
